American Computer Science League

2021-2022 ● Contest 1: Fibonacci Clock ● Intermediate Division

PROBLEM: ACSL's version of Philippe Chretien's "Fibonacci Clock" displays time by changing the colors displayed in 5 squares, whose side lengths correspond to the first 5 Fibonacci numbers (1, 1, 2, 3, and 5). Given the colors of the squares on the clock face, you must output the time that is represented in hh:mm format. The colors will be given to you as 5 individual characters representing the lower 1x1 square, the upper 1x1 square, the 2x2 square, the 3x3 square, and the 5x5 square in that order. (See https://basbrun.com/2015/05/04/fibonacci-clock/.)

Red squares are used to represent only hours and green squares are used to represent only minutes. Blue squares are used to represent both hours and minutes. White squares are ignored. To find the current hour, add the values of the red and blue squares. To find the current minutes, add the values of the green and blue squares and multiply by 5 so that the number of minutes and seconds are in intervals of 5 between 0 and 60 inclusive.

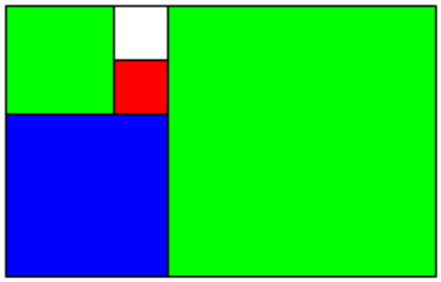

However, if the number of minutes is 60, change it to the next hour with 0 minutes and if the number of hours is 12 or more, change it to a valid time from 00:00 to 11:55. For example, 09:60 would become 10:00 and 12:60 would be 01:00.

The clock in the picture above is displaying 08:50. The hours are represented by the red 1x1, blue 2x2, and blue 5x5 squares (1+2+5=8). The minutes are represented by the blue 2x2, the green 3x3, and the blue 5x5 squares (2+3+5=10, and 10*5=50).

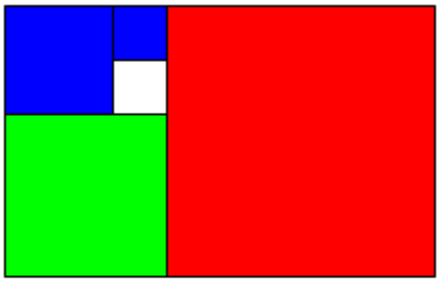

American Computer Science League

2021-2022 ● Contest 1: Fibonacci Clock ● Intermediate Division

The example at the left which uses the inputted characters R, W, G, B, G displays the time 04:50. The hours are represented by the 1x1 red square and the 3x3 blue square: 1+3=4. The minutes are represented by the 2x2 green, the 3x3 blue, and the 5x5 green squares: (2+3+5)*5 = 50. The example at the right which uses the inputted characters W, B, B, G, R displays the time 08:30. The hours are 1+2+5=8 and the minutes are (1+2+3)*5=30.

R W G B G - 04:50

W B B G R - 08:30

INPUT: There are 5 sets of data. Each set has 5 uppercase letters (R, W, B, or G) that represent the colors of the lower 1x1, the upper 1x1, the 2x2, the 3x3, and finally the 5x5 square, in that order. We guarantee that the input will represent a valid time from 00:00 to 11:55.

OUTPUT: For each line of data, print the time in hours and minutes formatted as hh:mm.

SAMPLE INPUT:

```
R W G B G
W B B G R
W G B R B
G G B B B
W R G G G
```

SAMPLE OUTPUT:

```
1. 04:50
2. 08:30
3. 10:40
4. 11:00
5. 01:50
```

2021-2022 ● Contest 1: Fibonacci Clock ● Intermediate Division

TEST DATA

TEST INPUT:

```
G R W B B
G G B G B
R R R R R
G G G G G
W B B B B
```

TEST OUTPUT:

```
1. 09:45
2. 08:00
3. 00:00
4. 01:00
5. 11:55
```

美国计算机科学联赛

2021-2022 ● **第一轮:** 斐波那契时钟 ● 中级组

问题：美国计算机科学联赛版本的菲利普·克雷蒂安“斐波那契时钟”是通过改变由五种正方形表示的颜色来显示时间的，它们的边长分别对应斐波那契数字的前五个数（1，1，2，3，5）。你要根据钟面上正方形的颜色，以hh:mm的格式输出其对应的时间。这些颜色会以五个字母的方式给出，依次代表下方1×1正方形，上方1×1正方形，2×2正方形，3×3正方形，以及5×5正方形。(见 https://basbrun.com/2015/05/04/fibonacci-clock/.)

红色正方形只能表示小时，绿色正方形只能表示分钟。蓝色正方形既可以表示小时，也可以表示分钟。白色正方形忽略。将红、蓝色正方形对应的值相加得出当前的小时，将绿、蓝色正方形的值相加再乘以 5 得出当前的分钟，这样分钟数和秒数**以 5 为间隔，介于** 0 到 60 **之间。**

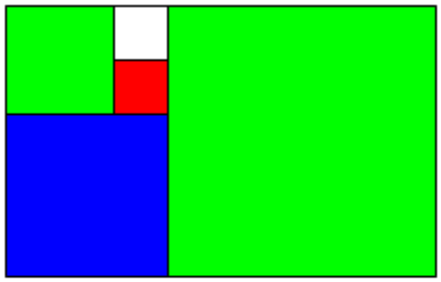

但是，若分钟数为 60，则将小时数加 1，分钟数变为 0；若小时数大于等于 12，则将其改 00:00 到 11:55中的一个有效时间。例如，09:60 就会变成 10:00, 12:60 就会变成 01:00。

上图的时钟显示的是时间是 08:50。1×1的红色正方形， 2×2的蓝色正方形以及5×5的蓝色正方形 (1+2+5=8) 表示小时。2×2 的蓝色正方形， 3×3 的绿色正方形以及 5×5 的蓝色正方形表示分钟数 (2+3+5=10, 且 10*5=50)。

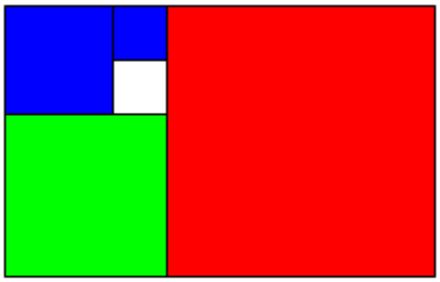

美国计算机科学联赛

2021-2022 ● 第一轮: 斐波那契时钟 ● 中级组

下图左边的示例通过输入字母 R, W, G, B, G 来显示时间 04:50。用 1×1 的红色正方形和 3×3 的蓝色正方形来表示小时数：1+3=4。用 2×2 的绿色正方形、3×3的蓝色正方形以及 5×5的绿色正方形来表示分钟数： (2+3+5)*5 = 50。右边的示例通过输入字母 W, B, B, G, R 来显示时间 08:30。小时数为：1+2+5=8 ， 分钟数为 (1+2+3)*5=30。

R W G B G - 04:50

W B B G R - 08:30

输入：有五组数据。每组包含 5 个大写字母（R, W, B, 或 G），这些字母依次表示下方 1×1 正方形, 上方 1×1 正方形, 2×2 正方形, 3×3 正方形, 以及最后的 5×5 正方形。确保输入内容能表示 00:00 到 11:55 之间的一个有效时间。

输出：打印输出每一行数据中由小时和分钟组成的时间，格式为 hh:mm。

示例输入：

```
R W G B G
W B B G R
W G B R B
G G B B B
W R G G G
```

示例输出：

```
1. 04:50
2. 08:30
3. 10:40
4. 11:00
5. 01:50
```

美国计算机科学联赛

2021-2022 ● **第一轮:** 斐波那契时钟 ● 中级组

测试数据

测试输入:

```
G R W B B
G G B G B
R R R R R
G G G G G
W B B B B
```

测试输出:

1. 09:45
2. 08:00
3. 00:00
4. 01:00
5. 11:55
